

DATA MANAGEMENT 101

Every study should have a data management plan. In this workshop, we will:

- examine why it is critical to have a data management plan (DMP)
- identify important elements of a DMP, and how to implement it at the onset of the project
- share fundamental best practices that will enable participants to develop an effective way to create, organize, manage and share data during and beyond the life of the research study

Wednesday Mach 1 | 11:30-1:00 pm | 5142 Burton Wing
